The company already implements of a Organization and Management Model, effectively implemented about D.lgs 231/01 e s.m.i EHS crimes.

Management:

- Declares that it is fully committed to operate in compliance with customer requirements and legally binding laws applicable to its own products and processes;
- It monitors its own processes through special internal performance indicators;
- It evaluates crucial Quality, Environment and Health and Safety issues when creating new products, or changing installations and structures;
- It always aims to improve the management and performance of its Integrated Management System;
- It identifies the functions that the entire organization must follow to prevent and manage both Environmental and health and safety risks;
- It involves and consults its entire staff and parties concerned by informing, forming, training and creating continued awareness, guaranteeing the dissemination of information inside and outside its own Organization;
- It guarantees the availability of resources (material, financial, technological, IT, human) required to reach the objectives and the proper and efficient management of these;
- It promotes savings and the protection of resources and the Environment and the prevention of pollution, injuries and occupational diseases;
- It adopts the required measures to prevent and manage Environmental emergencies and to promote Occupational Health and Safety;
- It periodically reviews and updates this Policy, making it available to staff and to the parties concerned;
- It pursues and promotes a non-tolerability policy towards violence and harassment perpetrated by company employees in the workplace;
- Shares the sustainability culture as an integral part of corporate business
- Promotes traceability and sustainability of raw materials, intermediate products and final products according to the ISCC Plus standard;
- It defines these as strategic goals:
 - Customer Satisfaction, by respecting the required requisites and anticipating requests;
 - It maximizes its own processes, aiming to improve their efficacy and efficiency;
 - It controls and reduces risks and eliminates dangers by the periodical maintenance of facilities and the development of prevention, defense and intervention measures;
 - It reduces water and energy consumption, waste and emissions.
